# Vyvo AI Vision and Goals

In the next 3 to 5 years, every single person in the world will have their own personal LifeCoPilot.

To ensure people choose VAI as their preferred LifeCoPilot, Vyvo has set 3 major goals for the next 3 to 5 years.

VYVO AI COPILOT AVAILABLE FOR ANYONE

To create the most human-like interaction with the LifeCoPilot — so natural and real that it becomes impossible to distinguish it from a person — while ensuring that in every conversation and interaction, privacy and data ownership remain the top priority, thanks to the world's first blockchain-based AI platform.

GOAL 1

vyvo

A fully agentic AI CoPilot, capable of interacting with hundreds or even thousands of agents, apps, and platforms — allowing your CoPilot to make a real impact on your daily life. Whether it's productivity, business, personal matters, or social interactions, your CoPilot becomes your true “Other You,” with no limits and no restraints.

GOAL 2

vyvo

To build an ecosystem where accessing and using your CoPilot is possible across multiple platforms, devices, and systems — a universal protocol that enables the integration of the Vyvo LifeCoPilot with hundreds of different devices and equipment: Wearables, Orbs, VR/AR Glasses, Home Systems, Automotive, Robots, Future Hologram Projections, and more.

GOAL 3
