VYVO™

Current and Upcoming Features

Beta Phase 1

- **Talk to it like a friend**: Just say what you need and VAI OS goes to work. Engage in seamless conversations. Ask it to do things for you that save you time, from setting reminders to booking meetings or helping you solve problems on the go.

- **It learns your routines**: The more you interact, the smarter it gets. It remembers what matters to you and offers personalized support based on your habits and lifestyle.

Beta Phase 1

- **Instant answers with less searching:** Why go to Google if VAI OS is standing by? Just ask! It can check exchange rates, translate a foreign sign, or help you whip up dinner with what's in your fridge, just to name a few examples.

- **Understand the world around you:** Start a real-time video chat and let VAI OS interpret for you in seconds: signage, products, or documents, etc.

Mobile Apps

We will have Beta version of our mobile apps
that are capable of making calls and receiving
calls from your assistant both on
Android and iOS.

More Natural Voices

With the new voice engine, conversations will be more natural and human-like with support of 32 languages:

English (USA, UK, Australia, Canada), Japanese, Chinese, German, Hindi, French (France, Canada), Korean, Portuguese (Brazil, Portugal), Italian, Spanish (Spain, Mexico), Indonesian, Dutch, Turkish, Filipino, Polish, Swedish, Bulgarian, Romanian, Arabic (Saudi Arabia, UAE), Czech, Greek, Finnish, Croatian, Malay, Slovak, Danish, Tamil, Hungarian, Norwegian, Vietnamese, Ukrainian & Russian.

Data NFTs are here...

- VAI OS subscriptions will allow users to mint 1 free Data NFT to secure their data easily.

- Users with existing Data NFT from inPersona system can easily use their NFT in VAI OS.

- Users who do not have a Web3 wallet will be able to easily create their wallet and have the option to secure their wallet in VAI OS infrastructure.
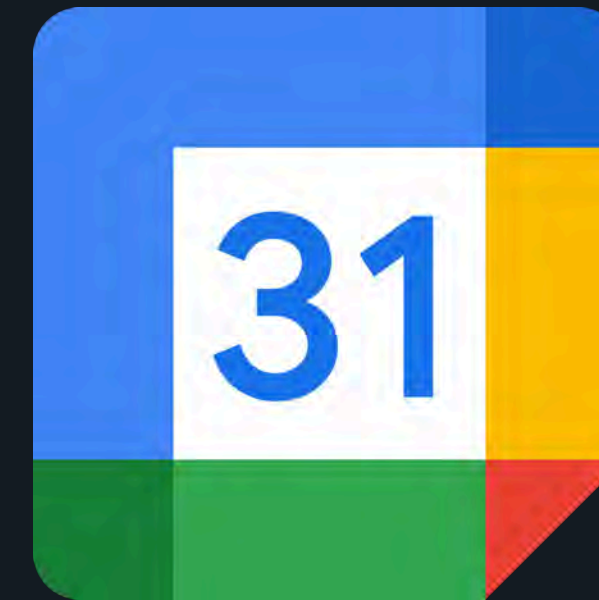

App Marketplace

Beta version of the app marketplace will be available for all beta testers. Users will be able to enable/disable apps inside the portal and authenticate their accounts for their Life CoPilot to access and use.

- Health app (communicates with Vyvo Smart or Heka Pro App to analyze health data)

- Gmail app (App that can read emails, summarize, and send email through your authenticated gmail account)

App Marketplace

- **Google calendar app** (App that can connect to your calendar. Get information on your events or add new ones)

- **Socialfi App** (App that can fetch information about your Vyvo SocialFi account and give your meaningful analysis)

- **Deep Research App** (App that can do planned, scientific level analysis on any given subject and create reports based on findings)

New Agentic Collaboration Workflow

Apps in the marketplace can seamlessly collaborate, working in harmony to automate tasks through your Life CoPilot.

For example, your Life CoPilot can check your emails each morning, filter out unimportant ones, and generate a concise summary of the priority messages all before you wake up! That saves you time and keeps you focused.

If a meeting is detected, it can automatically add it to your calendar and simultaneously conduct in-depth research on the topic to help you prepare.
